### Crystals-on-4

65,000 energy-saving LED pixels

## Crystals-on-4

Setting the right mood for an event is crucial to creating the perfect experience for the audience. Our cutting-edge Crystals-on-4 lighting system empowers clients to do just that. It features over 65,000 energy-saving LED pixels to create a programmable canvas that displays images and dynamic motion graphics in over 1,000 colour combinations. Simply select from our top 8 favourite motion graphic templates, or customise your own mood lighting with corporate logos or graphic patterns to inject more “oomph” into any event.

## In-Room Control Panel

The versatility of our spaces goes beyond our flexibility in layout and configuration. With one touch of a finger, the mood of the room and hall can be toggled seamlessly between different event settings through the in-room control panel, which houses controls for the lighting, temperature and audio of the room.

For convenience and time-saving, clients are given unrestricted access to freely adjust the room environment according to the event programme.
